DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2, 3, 5, 7-10, 11,12, 14-15,18 are rejected under 35 U.S.C. 102(b) as being anticipated by Imai et al..

Imai discloses a method of making nitride based semiconductor device structure by the following process steps: Providing a substrate, growing semiconductor nitride based compound semiconductor layer "24" on the substrate at growth rate of 20 angstroms /second., at a growth temperature of 300 C - 1000 C and film thickness of less 500 angstroms with different preferred thicknesses; and then growing nitride based compound semiconductor layer "25" on the surface of the buffer layer "24"; growing active nitride based compound semiconductor layer "26" and terminal layer "28"(see abstract, col. 7, lines 14-56). Imai further discloses compositional grading layer by changing constituent elements such as III elements. Claims are limited to AlBInTiGaN compound layer with a,b,c,d are less than or equal (\leq) to "0".

Art Unit:

Claims 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kondow et al in combination with Imai et al.

Kondow discloses a method of nitride based semiconductor layer structure with plurality of devices such as lasers, wave guide using core layer, PIN photo diode FET etc. on buffer layers "62,63" grown on substrate "61" to form OEIC. But Kondow do not disclose to form nitride based semiconductor layers with specific growth rate as instantly claimed. Imai discloses nitride based compound semiconductor layer similar to claimed growth rate. To obtain improved crystal growth in thin films thereby obtaining laser device with excellent characteristics(see summary of the invention).

Claims 4, 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Prior art discloses compound based buffer layer growth. .
